MANISH JANGIR

Data Engineer Intern | Python | SQL | Apache Spark

Rajasthan, India | 7425093303 | mannujangir7360@gmail.com | LinkedIn | github.com/Manishjangir01

PROFESSIONAL SUMMARY

Motivated BCA graduate in Artificial Intelligence and Machine Learning with knowledge of Python, SQL, Apache Spark, Hadoop, and data engineering concepts. Interested in building ETL pipelines, processing large datasets, and developing data workflows. Built and published ETL, SQL and machine learning projects on GitHub using Python, pandas, SQLite and pytest. Seeking a Data Engineer Internship to apply technical skills, gain practical industry experience, and contribute to data-driven projects.

TECHNICAL SKILLS

Programming	Python, SQL	**Data Streaming**	Apache Kafka
Big Data	Apache Spark, Hadoop	**Orchestration**	Apache Airflow
Data Engineering	ETL Pipelines, Data Cleaning & Validation, Data Warehousing, Data Modeling	**Databases**	MySQL, SQLite, PostgreSQL, SQL Queries
Python Libraries	pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Plotly	**Testing & CI/CD**	pytest, GitHub Actions, Git, GitHub
Machine Learning	Classification, Cross-Validation, Model Evaluation	**Analysis**	EDA, Data Visualization, SQL Analytics

PROJECTS

1. Sales ETL Pipeline

github.com/Manishjangir01/sales-etl-pipeline

Technologies: Python, pandas, SQL, SQLite, pytest, GitHub Actions

- Built an ETL pipeline that cleans and validates a messy sales CSV and loads a SQLite warehouse (fact table, rejected-rows audit table, indexes). On a synthetic 1,020-row dataset it removed 20 duplicates, rejected 49 rows and loaded 951 clean rows.
- Wrote SQL analytics (monthly revenue, top cities, best-selling products) with Matplotlib charts, plus 5 pytest tests, logging, a CLI and a GitHub Actions workflow.

2. Customer Churn Prediction (Machine Learning Pipeline)

github.com/Manishjangir01/ml-intern-portfolio

Technologies: Python, scikit-learn, pandas, Matplotlib, pytest, GitHub Actions

- Built a scikit-learn pipeline comparing logistic regression with a random forest on a synthetic 1,200-row churn dataset. Selected the model by holdout ROC-AUC (0.79) and 5-fold cross-validation (0.80 ± 0.02); the models were close, as the README notes.
- Produced ROC curve, confusion matrix and feature-importance charts, and wrote 9 pytest tests that run in GitHub Actions.

3. SQL Data Analysis (MySQL)

github.com/Manishjangir01/Student-Management-SQL-Project

Technologies: SQL, MySQL

- Designed relational schemas (students, courses, enrollments) with primary keys, foreign keys and CHECK constraints, and a re-runnable script that rebuilds the sample data.
- Wrote analytical queries with JOIN, GROUP BY and aggregates: average score per subject and gender, top performer, average grade per course, failed-student counts.

4. Big Data Analytics Pipeline

github.com/Manishjangir01/big-data-analytics-pipeline

Technologies: Python, PySpark, Apache Spark, SQL, PostgreSQL | *Built with guidance from an AI mentor*

- Built a pipeline for cleaning, transformation and validation of large datasets using Python and PySpark, with Spark SQL analytics.
- Designed a workflow to load processed data into PostgreSQL for analytics.

5. Automated Web Scraping and Data Pipeline

github.com/Manishjangir01/web-scraping-data-pipeline

Technologies: Python, SQL, ETL | *Built with guidance from an AI mentor*

- Designed a workflow that collects publicly available data from websites and transforms it into a structured format.
- Applied data cleaning and validation, stored processed data in a database for querying and analysis, and organized the workflow into reusable Python components.

EDUCATION

Bachelor of Computer Applications (BCA) — Artificial Intelligence & Machine Learning | Parishkar college of global excellence, Jaipur | 2026 | CGPA: 8.1

CAREER OBJECTIVE

To begin my career as a Data Engineer Intern, strengthen my knowledge of data pipelines and big data technologies, and contribute to reliable data processing solutions.
